Subject:

I've been following the Rosemont Copper project for a long time. I've seen the plans get reviewed carefully and all the environmental standards being met. Rosemont is a needed entity, plain and simple.

Based on science, facts, and environmental standards, Rosemont will not jeopardize the species in the project area and will conserve resources well—especially water. I am excited about the new reclamation methods they will use to immediately reuse the area and revegetate the land. Even nine years worth of water has been stored up already!

Every claim they have brought against Rosemont has been proven to be false. The opposition is self-serving and isn't looking out for our interests. Instead it's about politics. They don't care about our lack of employment or the fact that we don't have the kind of tax revenue we need to help our towns.

What about the rest of us? The ones without plenty of cash to fund campaigns that keep other parts of the state economically disenfranchised? Please hear us and do what's right so we don't become a ghost town. We need the income and we need it soon.

We are so close to being able to break ground on this 21st century mine, and we need your decision. We need the Record of Decision without further delay.
